

Flora

L-inħawi jhaddnu bijodiversità rikka li tista' tiġi apprezzata aħjar bi żjarat fil-park tul l-istaguni kollha. Id-diversi habitats isostnu speċi differenti li jinkludu dawk endemiċi(*) u/jew rari. Ir-riħ qawwi mill-Majjistral u n-nuqqas ta' ħamrija u xita huma d-diffikultajiet prinċipali li għandhom il-pjanti li jikbru hawn. Għalhekk trid iżzomm għajnejk miftuħa għal pjanti żgħar u b'saħħithom aktar milli tistenna li tara ħafna sigar jew arbuxelli kbar li ma tantx jistgħu jgħixu f'dawn il-kundizzjonijiet. Nitolbuk ma taqta' ebda fjuri/pjanti waqt iż-żjara tiegħek.

Nota: Diversi speċi huma protetti bil-liġi.

The area supports a rich biodiversity which can be fully appreciated by multi-seasonal visits to the site. The various habitats present support different species some of which are endemic() and/or rare. The strong northwesterly winds and the lack of soil and rainfall are the main constraints for plant growth. So keep an eye out for small, tough plants as very few large shrubs or trees can survive in such conditions.*

We ask you not to pick any flowers/plants whilst visiting.

Note: Several species are protected by law.

Fix-Xagħri / In the Garigue

Tulliera ta' Malta*
Maltese Fleabane

Tengħud ta' Malta*
Maltese Spurge
