

REPTILES & AMPHIBIANS OF THE MALTESE ISLANDS

Public Lecture
By Arnold Sciberras

Tuesday 18th December @ 6.00pm

Lecture at Din I-Art Helwa office at 133 Melita Street Valletta.

IL-MAJJISTRAL
NATURE AND HISTORY PARK

This talk will focus on the biodiversity of herpetofauna (reptiles and amphibians) which the Maltese islands have to offer. Several interesting new discoveries including first to be seen populations of the Maltese Wall Lizard are included in this presentation.

This Majjistral Park event is being held in conjunction with Din I-Art Helwa at their office. It is a free event but donations are welcome.

Bionote:

Arnold Sciberras has been studying the Maltese natural history for many years focusing mostly on entomology and herpetology. He also has a special interest on the microhabitat of the minor islets and rocks of the Mediterranean. He published extensively on these subjects focusing mostly on new records and observations on the behaviors of several species.
